Election/Restrictions

1. Applicant's election of claims 1-32, 36-77 and 81-83 in the paper received 11/25/03 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 76 and 77 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by either one of Saini and Groger et al.

Saini discloses an assay device which clearly includes all of the presently recited features. See e.g. Figure 3C of Saini and corresponding description thereof disclosing an assay device having a light source, plural analyte receiving areas, light redirecting and transmitting means, all of which are integrated and provided on a single support.

Similarly, Groger et al disclose an assay device which clearly includes all of the presently recited features. See e.g. Figure 4 of Groger et al and corresponding description thereof disclosing an assay device having a light source, plural analyte receiving areas, light redirecting and transmitting means, all of which are integrated and provided on a single support.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 31 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mioduski in view of Aihara.

Art Unit: 1743

Aihara discloses an apparatus for chemical analysis comprising a light source, a plurality of vessels disposed in an optical path of the light source, a plurality of light pathways leading through the sample vessels, and a single detector receiving the transmitted light. The device of Aihara differs from the claimed invention in that it does not include a single printed circuit board for receiving and transducing the so received light.

Mioduski discloses a similar apparatus for optical analysis and further teaches the provision of a circuit board for detecting and transducing light from a sample vessel. It would have been obvious to one of ordinary skill in the art to provide the apparatus of Aihara with a printed circuit board as a known means of detecting light transmitted through a sample under study, as per the teaching of Mioduski.

8. Claims 1-30, 36-75 and 81-83 are allowed.

9. The following is an examiner's statement of reasons for allowance: the prior art fails to teach or fairly suggest the presently recited geometrical construction of a waveguide for optical chemical analysis.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
